

Cycled Air program

Save money and energy with Lake Country Power's cycled air conditioning program and cut your air conditioning costs in half!

Special rate or credit

A cycled air program is your opportunity to take advantage of either a lower electric rate or a credit for June, July and August, while still keeping your home cool and comfortable. **By signing up for the cycled air program, your air conditioner is cycled on and off every 15 minutes for up to six hours daily.**

Your circulation fan can continue to circulate air in your home or cabin during "control" periods.

It's simple to convert either standard or high-efficiency central air conditioning units to the cycled air program. All you need is a radio control available from Lake Country Power. The radio receiver serves as a switch that controls the central air conditioners on the program and is mounted on your home or meter pole.

High efficiency air conditioners

High efficiency central air conditioners save you money over the life of the system by using less electricity to cool your home. This efficiency also reduces electrical demand for Lake Country

Power and is designed to control peak electrical demand during hot weather.

If your air conditioner has a seasonal energy-efficiency rating (SEER) of 13 or higher, it may qualify for a rebate if installed by an HVACR certified installer. It may also qualify for a special Energy Wise® rate.

Lake Country Power can provide you with a list of contractors who can install central air conditioning systems. Ask one of our member service representatives today!

Rebates

Rebates offered for a limited time and subject to change without notice.

Call your local Lake Country Power service center or visit www.lakecountrypower.coop for more information:
